

# Legionella Test

The Legionella test is breakthrough technology for the rapid detection of Legionella pneumophila SG1 bacteria in water.

- Practical design for field deployment
- Fast results
- Easy to use
- Positive / negative test results

## TEST KITS TAILORED TO YOUR APPLICATION

**Single Legionella Test** - Tests any water sample to show presence / absence of legionella

Whether you need to sample on-site because access to lab systems is impractical, or the delays are commercially unacceptable, then this Legionella test can immediately identify risk and reduce liability. Our test methods are specifically targeted at the serogroup responsible for the vast majority of infections.

Specification	Syringe Legionella Test
Sample type	Water collected from any source
Sample volume	0.1 ml
Sensitivity	Presence / absence Positive = Over 100 CFU - Equivalent accuracy of lab testing
Processing time	2 minutes
Development time	25 minutes
Method	Drop 0.1 ml on to the test circle
Pack size	6
Kit contents	1 x test strip 1 x syringe 1 x instructions
