

ON-BOARD AUTOMATIC CALIBRATION STATION FOR PORTABLE GAS DETECTORS

The Always Be Calibrated A-B-C™ system will ensure you never waste a droplet of calibration gas ever again. Our self-calibration self-certification bump test station only uses the exact amount of gas required to calibrate your gas detectors! The A-B-C™ system delivers on-board automatic and fail-safe calibration and bump testing of your detectors during re-charging. The equipment automatically generates tamper-proof serial number specific calibration certificates, completely free from human intervention and error. Simply put the detectors in the A-B-C™ station and it does the rest.

In addition, the A-B-C™ solution provides you and your crews with unique training videos that give simple, step-by-step instructions on the setup, use and calibration of equipment.

Never again wait for on-shore certification: you'll be able to produce instant, verifiable, tamper-proof certificates at any time at the touch of a button. Take the headache away from inspections and self-certificate your gas detection equipment whenever you need!

A-B-C™ “Always Be Calibrated” Solution

- ‘Bump’ tests detectors in thirty seconds – quick and simple calibration
- Automatic calibration after any failed test or when calibration is due
- Produces a tamper-proof calibration certificate acceptable to Class, Port State Control and Oil Majors
- Uses only a minimum amount of gas necessary – saves money on wasted calibration gas from manual testing
- One solution – complete supply of the equipment and gas through one point of contact

WHAT'S INCLUDED:

The A-B-C™ Solution

One kit for your gas detection compliance

- Marine 4™ specialist portable quad gas detector (Marine 5™ option available)
- Self-calibration self-certification station
- Upgrade and include Tankscape™, our inerted cargo tank gas detection system

MARINE 4™

Multi and single gas detectors

- MED “wheel marked” – certified for use on all vessels
- Integral sampling pump – flexibility for pre-entry into deep tanks or holds
- ‘Crew-safe’ fail-safe sensor technology
- Tough and impact-resistant design, built to last on ships

MARINE TANKSCAPE™

Cargo tank inert gas monitoring vessels

- Up to 5 gases can be simultaneously measured and displayed
- Simple calibration with tamper proof certificate printing on-board
- Enhanced data logging with tank identification to simplify your monitoring analysis

FASTCALGAS™

Marine calibration gases

- World's first 2-year shelf life – all quad, H2S, and other reactive mixtures
- Highest gas production standards in the world
- Every cylinder analysed for quality
- Only need one delivery of gas to your ships every two years
